Understanding the Reports

- This section will discuss the standard reports found in Dairy Comp. These reports can be modified, and other similar reports and graphs can be created in Dairy Comp.
- To make full use of the reports, pertinent information such as clinical mastitis events and culture information needs to be recorded in Dairy Comp.
- Your Veterinarian and DHIA Field Technician can give you additional information about these reports.

Definitions

- **SCC is the abbreviation for Somatic Cell Count. These cells are primarily dead white blood cells that are being flushed from the animal through the milk.**
- **Some Somatic cells will normally be found in the milk, but if the levels are above 200,000 cells per milliliter of milk it is likely that the cow has a mastitis infection.**

List Sorted by LgSCC

- This is a list that contains both current and historical somatic cell count data, as well as other important information on all milking cows.
- The default sort is from highest to lowest somatic cell count cows, but, like other reports in Dairy Comp, it can easily be resorted by clicking on another heading to sort it by that item.

Bulk Tank SCC Analysis

- This is a report showing effects of individual cows on bulk tank SCC and the economics of withholding individual cows from the bulk tank.
- While individual and bulk tank SCC counts will vary from day to day, this report gives a good indication of the impact of the highest count cows on the average bulk tank SCC.
- Milk prices and SCC differentials can be adjusted.

List – Clin. Cases

- **This list contains current and historical somatic cell count and other mastitis information on cows with one or more clinical flare ups this lactation.**
- **Most recent cases are on the top of the list.**
- **Clinical mastitis events will have to be recorded to make the information accurate**

List of Positive Cows

- This list contains information on all cows that have ever been above 200,000 cell count this lactation.
- In most herds a fairly large percentage of the animals will be above 200,000 at some point in their lactation and will end up on this list.

Information is broken down by every 100 days in milk.

Graphic Plot Log SCC

- Produces a graphic plot of an individual cows' current lactation's cell count by testday.
- Pressing the next plot button will display the graph for the next cow.
- You can see trends as you look at the individual graphs of each cow.

Scattergraphs-LgSCC

- This is a series of log linear somatic cell count graphs about your herd.
- You can use them to get a graphic representation of what is happening in regards to mastitis control within your herd.
- You go from one graph to the next by pushing the escape key.

Scattergraphs-LgSCC

The screenshot displays a software interface with a menu bar at the top containing 'File', 'Events1', 'Events2', 'DHI+ID', 'Health', 'Vx+BST', 'Rpr+Cul', 'Prod', 'Mast', 'Misc', and 'Help'. Below the menu bar is a toolbar with icons for printing, zooming, saving, and data manipulation. A 'Command ?' input field is present. On the left, there are 'Reports' and 'Lists' sections. The main area shows a scatter plot titled 'MASTG1 : Current Log' with a y-axis labeled '8'. The plot contains several data points represented by colored squares (red, yellow, green). A context menu is open over the plot, listing various options: 'List Sorted by LgSCC', 'BulkTrk SCC Analysis', 'List - New Infection', 'List - Clin. Cases', 'List - Positive Cows', 'Summarize SCC', 'Graphic Plot LgSCC', 'Scatter Graphs-LgSCC' (highlighted by a mouse cursor), 'Tables of Lin. SCC', and 'SCC Tables by BName'.

MASTG1 : Current Log

8

- List Sorted by LgSCC
- BulkTrk SCC Analysis
- List - New Infection
- List - Clin. Cases
- List - Positive Cows
- Summarize SCC
- Graphic Plot LgSCC
- Scatter Graphs-LgSCC**
- Tables of Lin. SCC
- SCC Tables by BName

- Displays the linear score by Days in Milk.
- Each block is one of the cows in the herd.
- Animals above 4 LgSCC are considered likely to be infected.

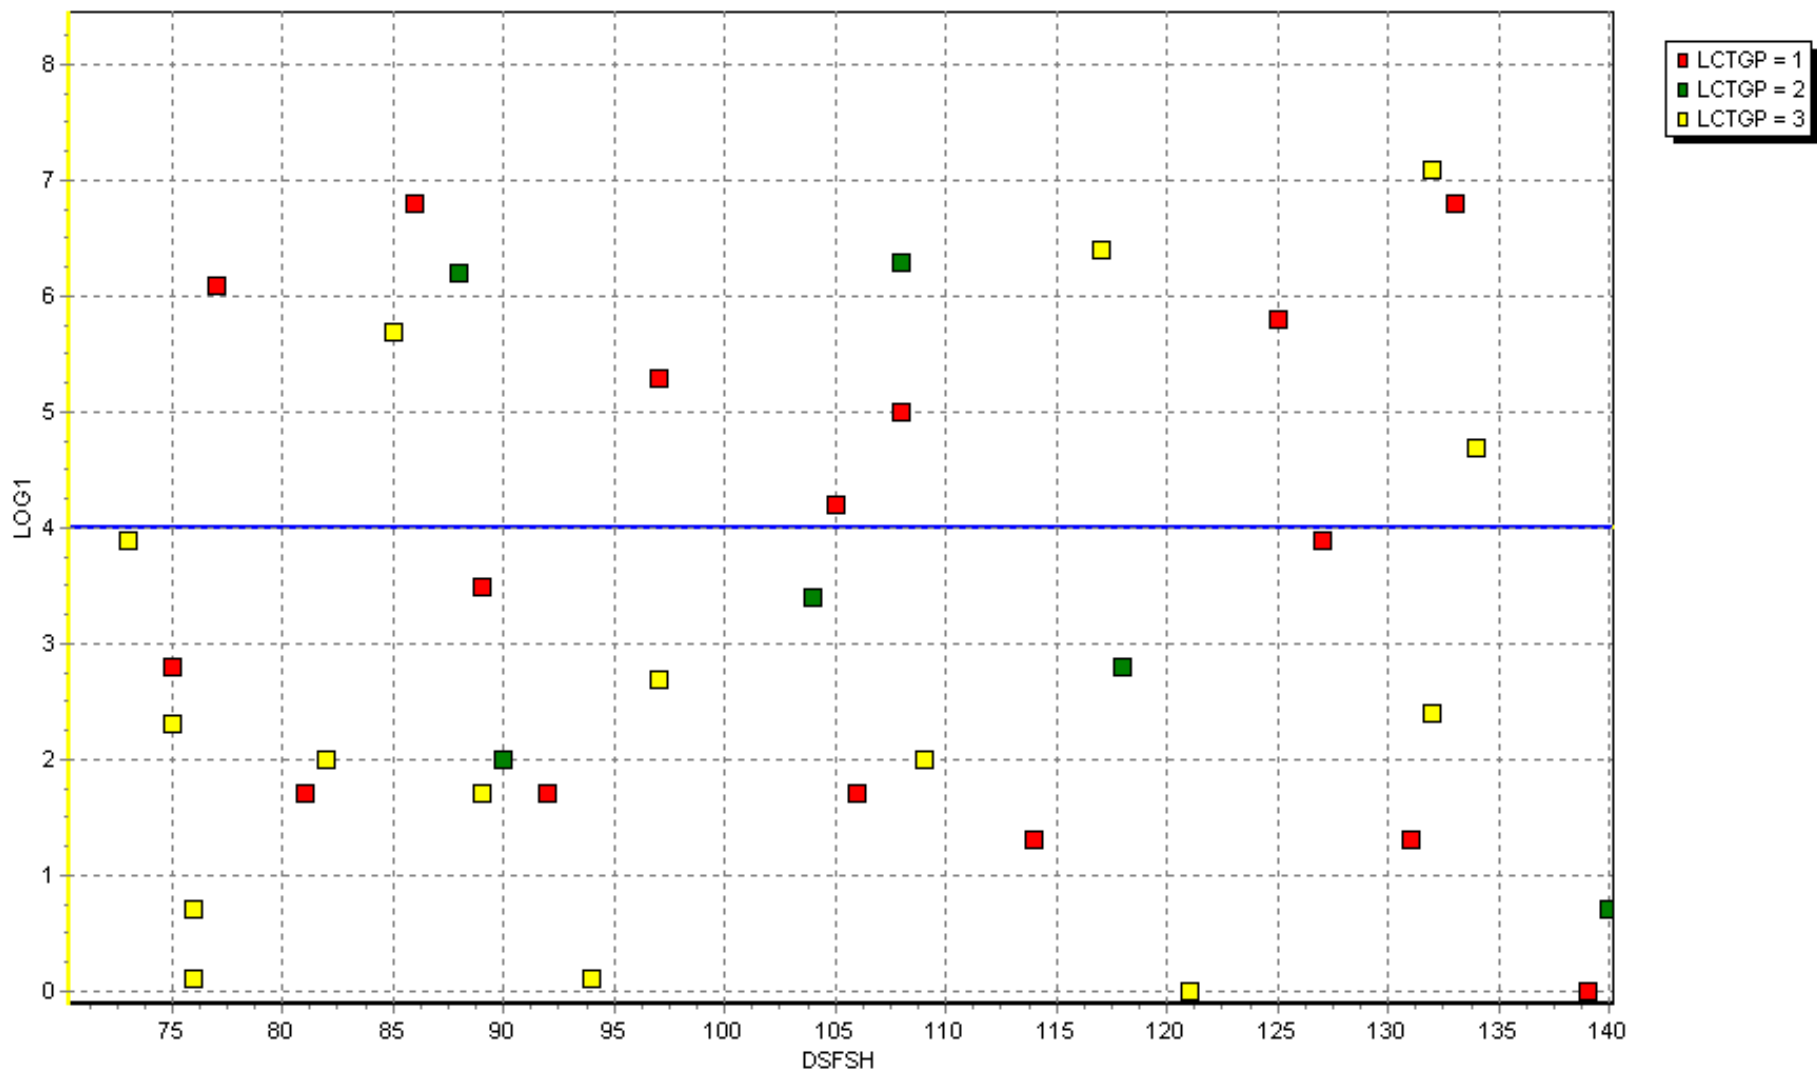

- This graph compares the linear score from this test to the last.
- Lower left Quadrant is animals that were less than a 4 LgSCC both times.
- Upper left is new infections (above 4 now, less than 4 on last test).
- Upper right is chronic animals.
- Lower right is animals that would be considered cures since the last test.

MASTG3 : Linear SCC at First Testday after Fresh

- This graph shows their first LgSCC and their current Days Since Fresh.
- You can expand areas of these graphs by selecting it with your mouse.

MASTG3 : Linear SCC at First Testday after Fresh

- This is an expansion of 70 to 140 Days since fresh.
- Seven of the Sixteen heifers that came fresh in this period were infected.
- You can also go into a cows' individual cowcard by clicking on a her box.

•This is the Testdays page of the heifer that is in the upper right corner of the previous graph.

•Note that her SCC has dropped considerably since fresh.

- This graph compares the current LgSCC to her first test day LgSCC.
- Lower left is less than 4 (not infected) both times.
- Upper left is infected now, but was not when fresh.
- Upper right is infected both times.
- Lower right was infected when fresh, but less than 4 now.

- This graph compares Log1 (first test day) to her DRYLG (her linear score when she dried off from her last lactation).

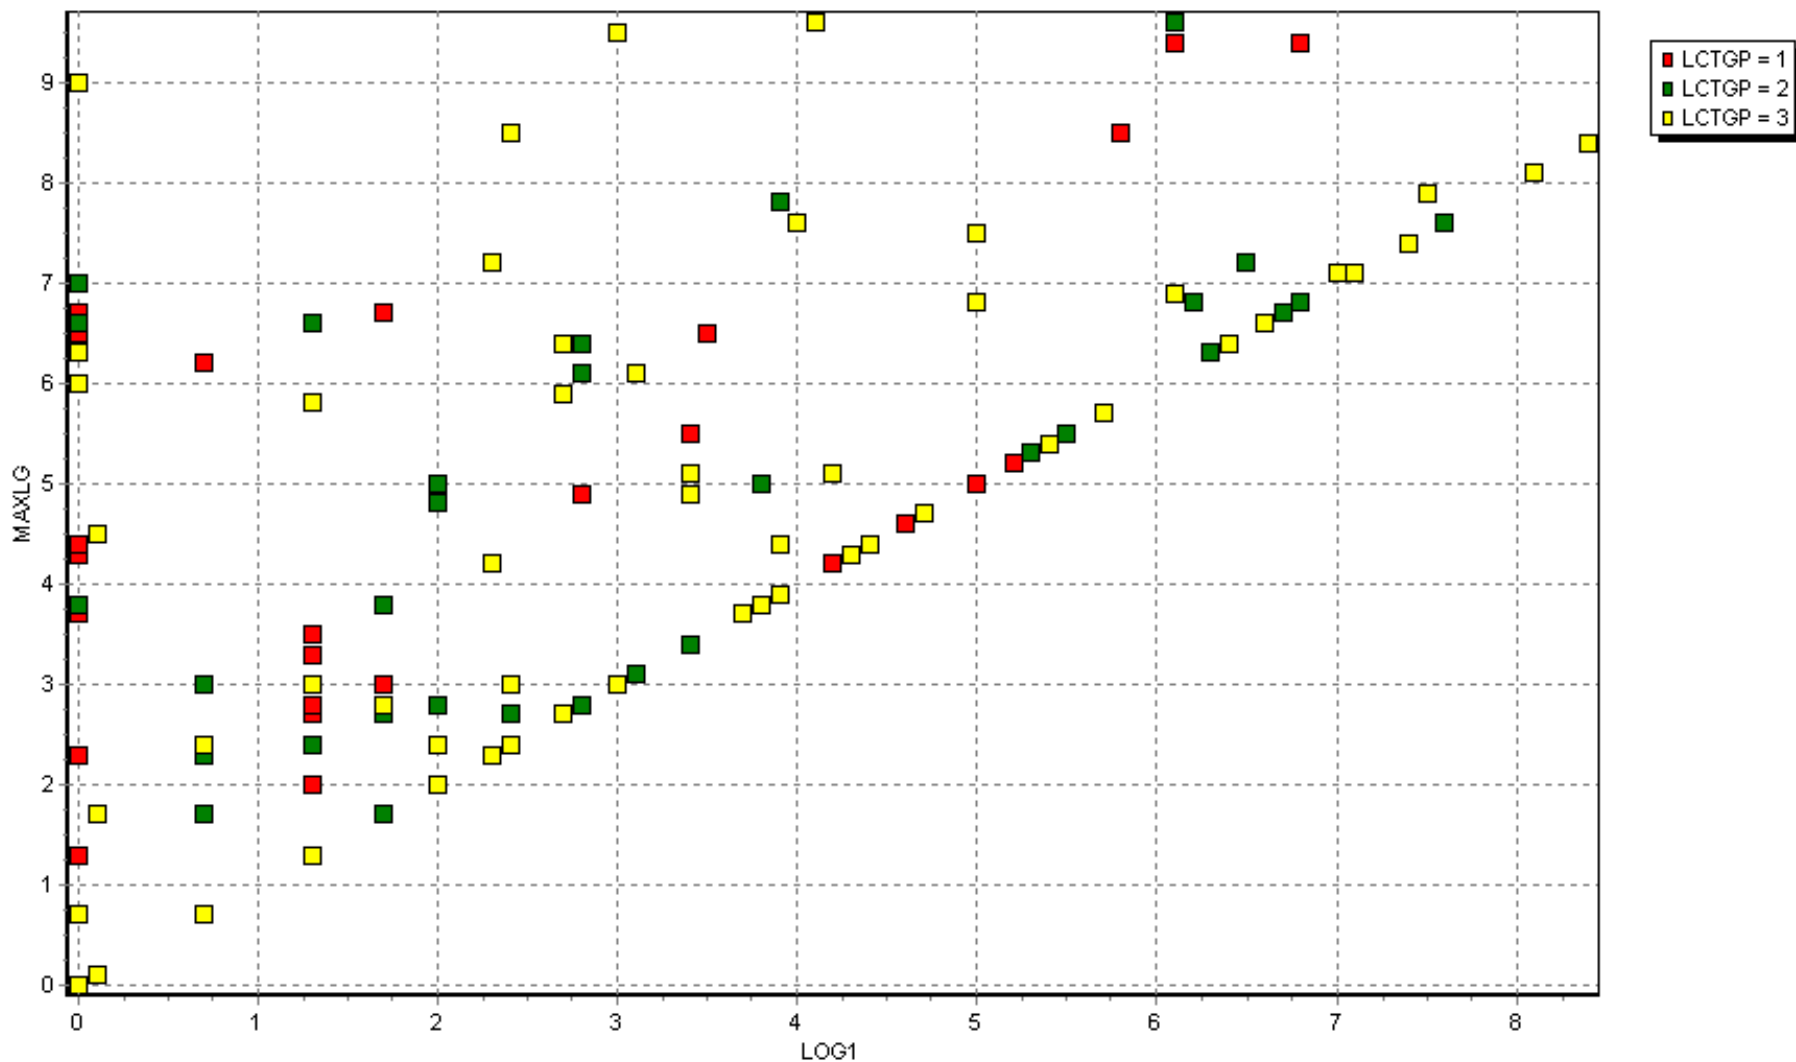

- It will only apply to 2nd lactation and older animals.

MASTG8 : Highest LgSCC-Cows Fresh Last 450 Days

- Shows the highest LgSCC for animals fresh in the last 450 days.

- Animals that were sold or died are included in the graph.

- Shows the highest LgSCC compared to what it was on their first test.
- Animals on the diagonal line had their highest score when they came fresh. Keep in mind that some of those will be animals with just one test.

Tables of Lin. SCC

- This is a series of tables of various SCC linear scores.
- These are similar to the graphs just shown, but instead of using blocks for individual cows they show the number of animals and the percentage of the herd in each quadrant.
