

# Events

**Entering Events in DC 305**

# Events1

- **Choices under this heading allow entry of dates and other information on the individual animal “events”, such as freshenings, breedings, plus other management related animal events.**
- **Events1 and 2 are used in the collection of information on your herd. Recording this information will help to determine what areas of your herd are improving and what areas need more attention.**

# Today's date

- **Change the date used by the program as “today”. This is meant only to be used to reset the date temporary to ease list production or event recording. If computer date itself is wrong reset in DOS with the DATE command. This screen will allow you to change the date one day at time, or if you need to play catch-up you can enter a date 2 or 3 weeks or months ago.**

Show Calendar

# Fresh

- **Allow recording of date, calf identification, and other information about a newly fresh animal. This option makes many changes in a cows record; take care to be accurate.**
- **This screen will allow you to enter a cow as fresh. This screen will look like a lot like the rest in the Events menu.**
- **Make sure you are in the correct screen since they look a lot alike, but the event is in the yellow window near the top of the page.**

# Heat, Not Bred

- Record an animal as being detected in heat, but not inseminated.
- If the animal was actually inseminated or bred by a bull, use the choice “Bred” instead.

1/31/01

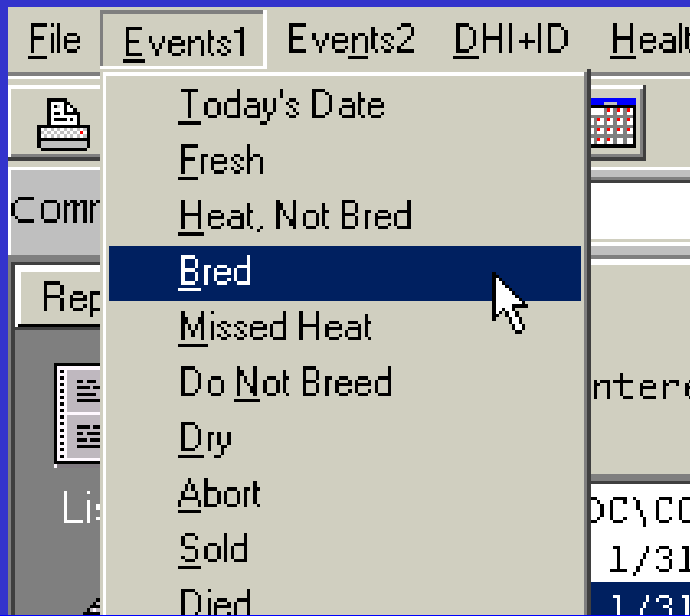

HEAT Event Date

-

HEAT Event Remark

# Bred

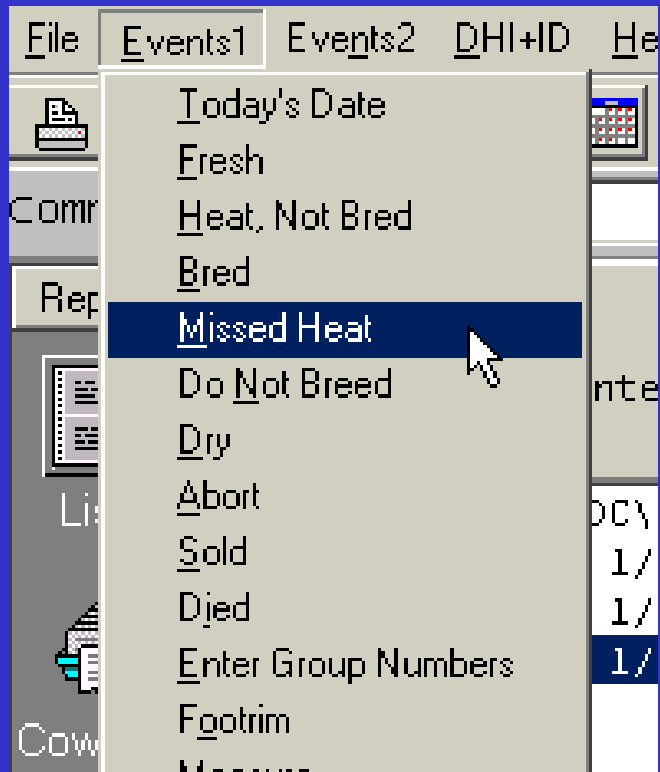

- **Recorded date and sire information for an animal that was inseminated or bred by a bull.**
- **“Codes” (standing heat, timed breeding , treatments, etc.) for the breeding are also available.**

1/31/01	BRED Event Date	
3 Last Sire BEEF on 6/26/99	S	
0 Heat Only	S	Standing Heat

2 2nd Sire Choice	K	K-MAR\Chalk
3 Last Sire BEEF on 6/26/99	V	Vet Palpation
4 Bull /Unknown	B	Blood
5 Last Sire used Today	M	Mucus Only
	L	Prost-Standing
	G	Gnrh Post-Inf.

# Missed heat

- Record date and information for an animal with a “missed” heat, usually by seeing blood on tail.
- Do not use if cow was bred AI or by bull or if cow was actually seen in heat.

1/31/01

MISHEAT Event Date

-

MISHEAT Event Remark

# Do Not Breed

- **Mark an animal as “Do Not Breed” so she no longer shows up on lists of open cows, prostaglandin lists, or the vet list.**
- **If you decide to place the cow back on the active list, type RC=3 at her cow card.**

DEWORM Event Date

-

DEWORM Event Remark

# Events 2

- **Another events entering section within DC305**
- **Choices under this heading continue the previous heading, but are more disease related. Most users have one entry per episode, not each time animal treated. The remark can always be (E)dited from the cowcard.**

# Clinical Mastitis

- Record a clinical mastitis case (flare-up).
- Use the remark to record information such as quarter affected or treatment used.
- For easier analysis later, use consistent remarks when recording.
